Patient App

Feature-loaded patient care app to enables users seek doctor advice & treatment online

Website

Feature-rich patient care website to let users seek doctor advice & treatment remotely.

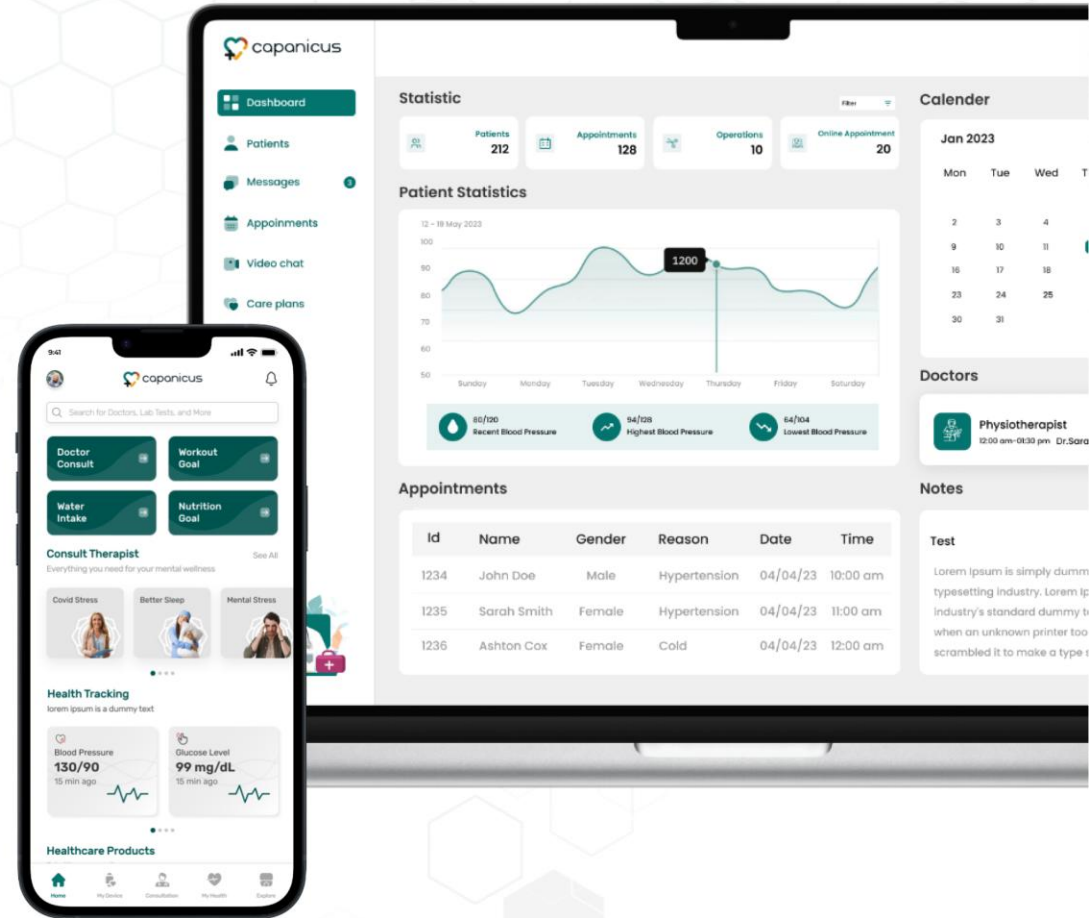

Admin Dashboard

A bird eye's view to control & manage Nizcare's business with the powerful dashboard & analytics

Doctors App

A robust app to help healthcare experts connect with their patients & provide the best care

Technology We Use

Android & iOS Development is in **REACT NATIVE**

Backend Development is in **LARAVEL, PHP, NODE.JS**

Admin Panel Development is in **ANGULAR, REACT JS**

About Healthcare App

Our app is meticulously designed to help healthcare professionals connect effortlessly with patients anytime, anywhere. Equipped with useful and easy-to-use features such as remote consultations, the app enables doctors to provide quality and personalized care to more patients, leading to improved health outcomes. By streamlining processes, it helps healthcare providers save costs and effort and enhance efficiency.

Simplified Appointment & Patient Management

Challenge

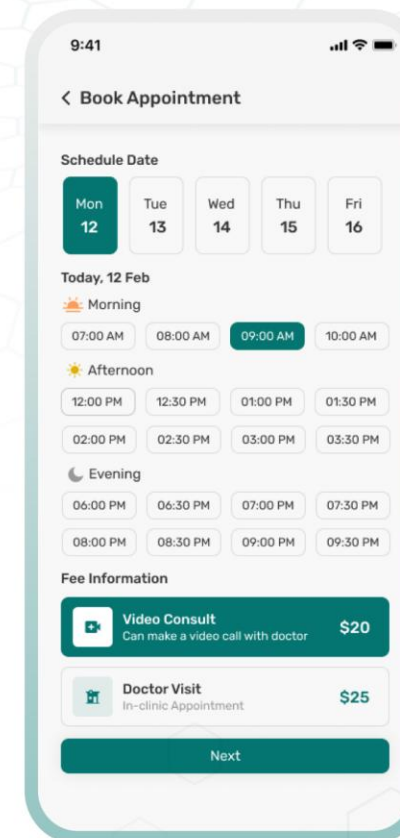

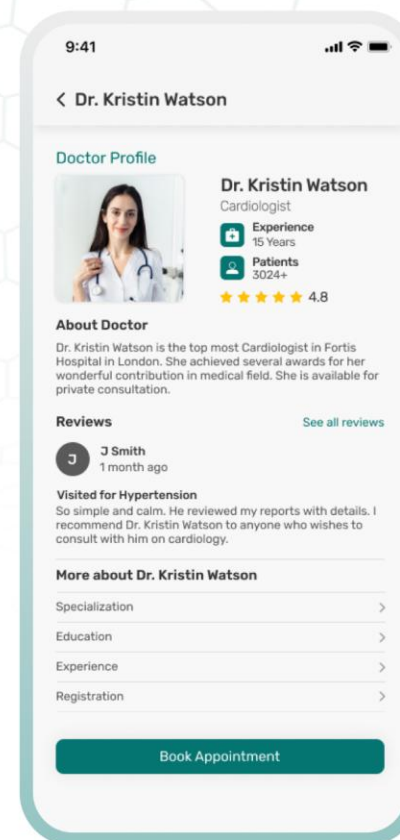

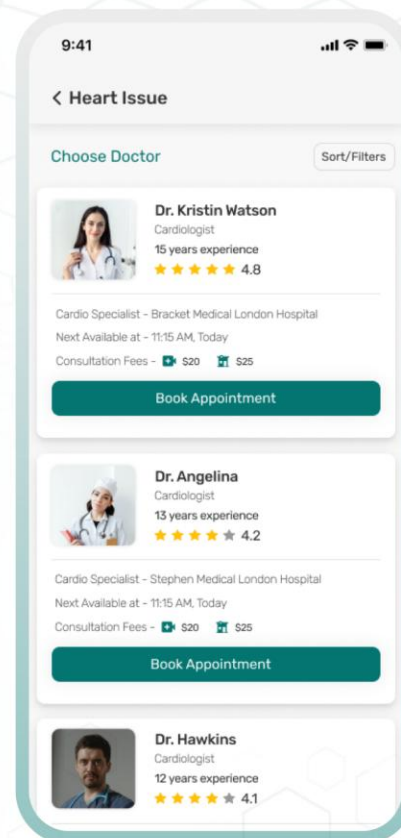

The client was looking for a solution that could enable patients to book appointments with expert doctors in an easy and hassle-free way.

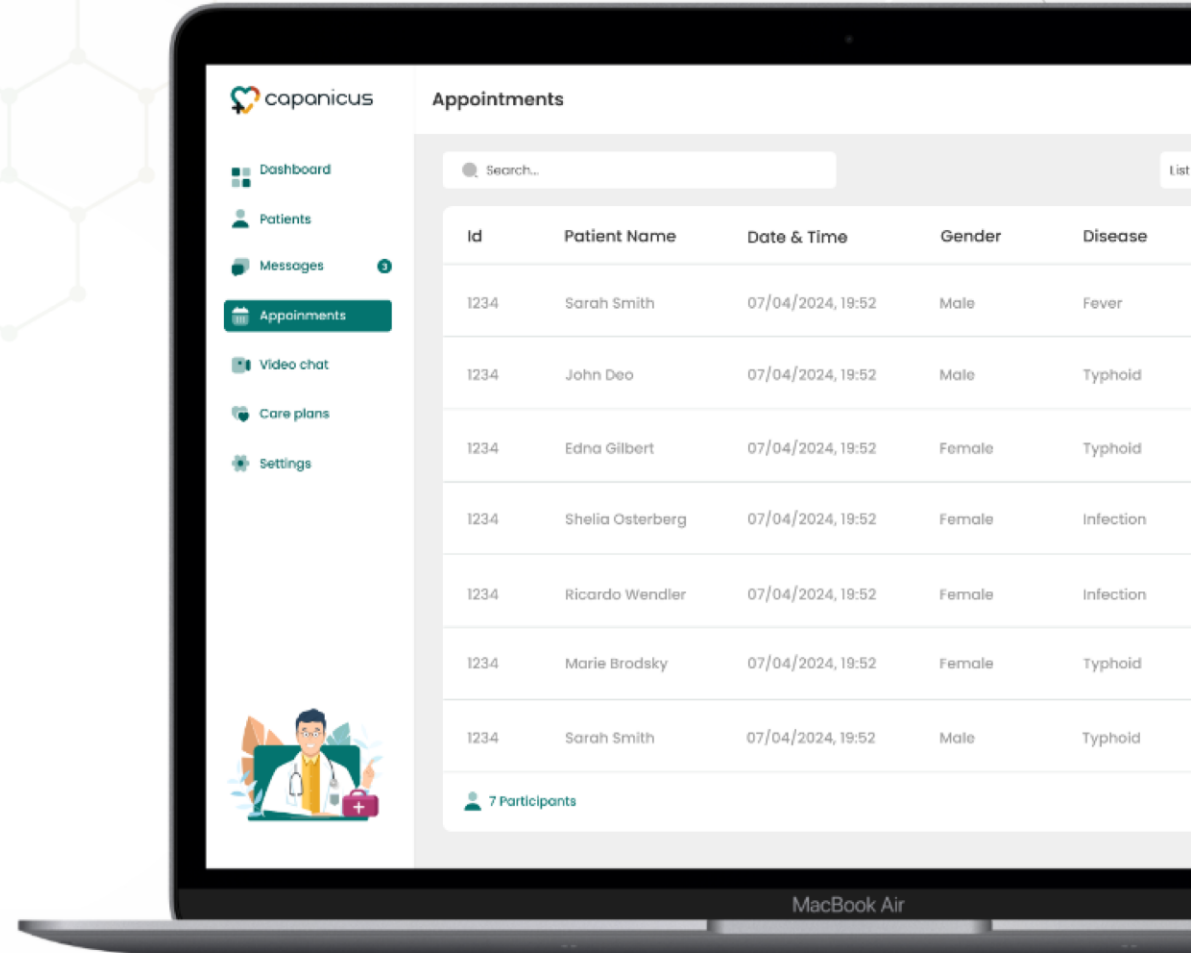

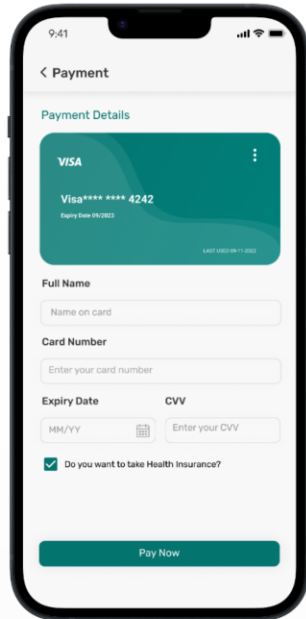

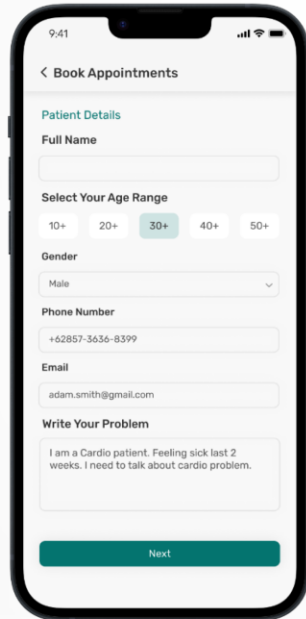

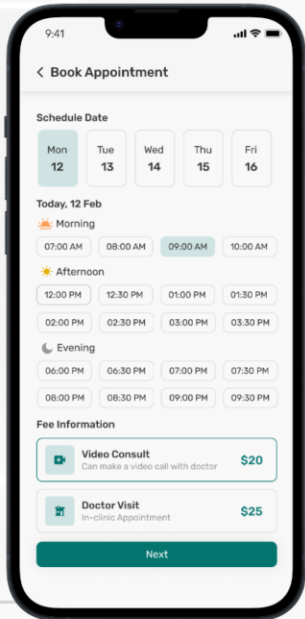

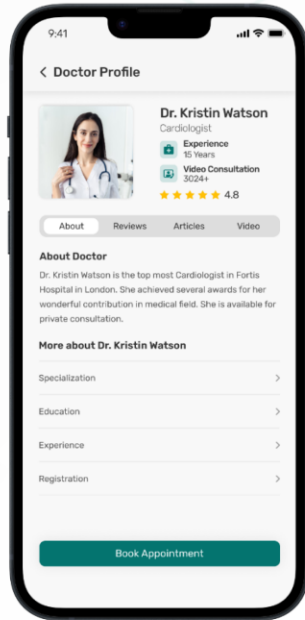

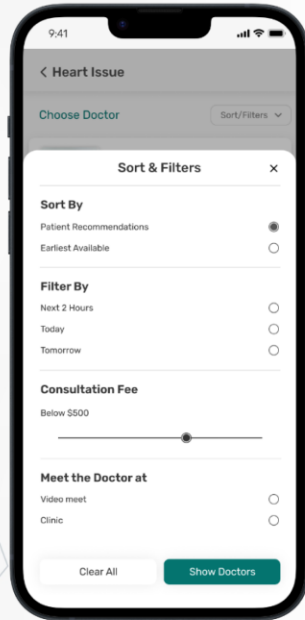

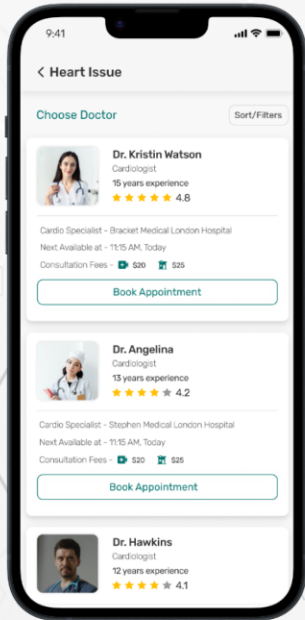

Solution

Based on his needs, we created an advanced online appointment booking system operated through an app. It enabled users to book or reschedule appointments instantly with the best doctors available. Also, they could choose the doctor's home visit option from the app.

Impact

The app facilitated seamless doctor-patient communication, improved patient convenience, saved time, and reduced healthcare administrative burden.

1:1 Holding Virtual Consultations Made Easy

Challenge

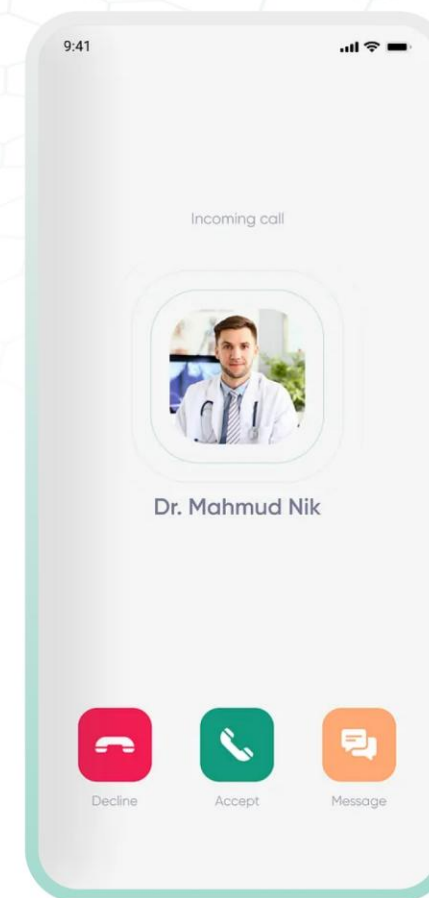

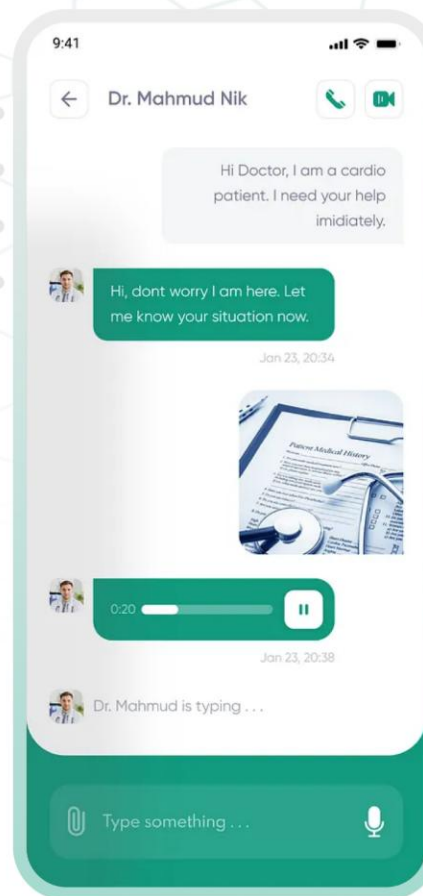

The challenge was to provide users & doctors with multiple ways of holding consultation meetings.

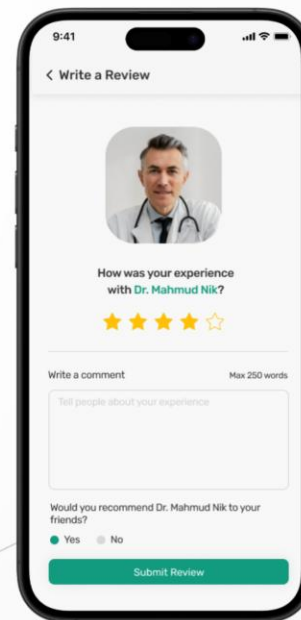

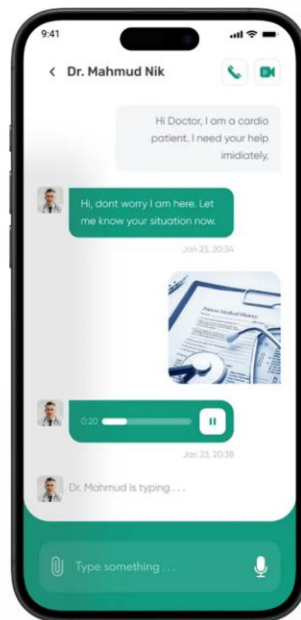

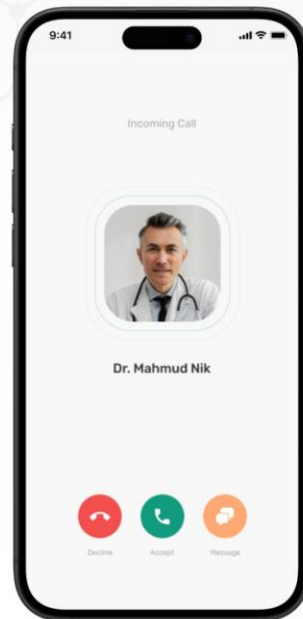

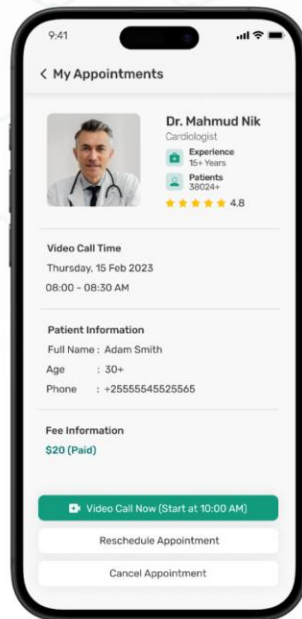

Solution

Capanicus addressed it by building an advanced and powerful conversational marketplace equipped with three different modes of consultation - Video, Audio & Text. Patients could easily choose their preferred mode of consultation and doctors could charge them as per the chosen mode.

Impact

The availability of more options to consult specialists and doctors led to a significant increase in the number of users registered on the platform.

Patient Health & Vitals

Challenge

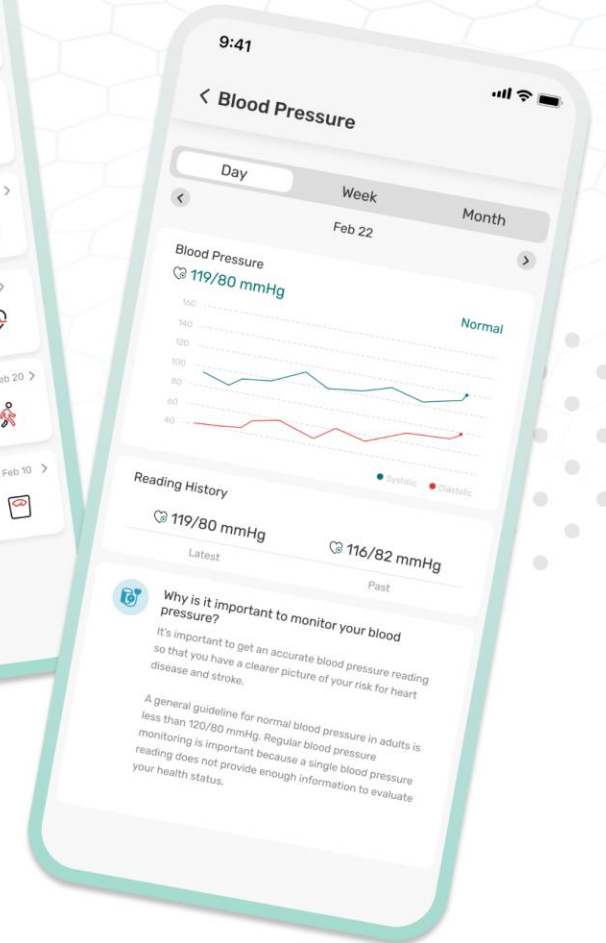

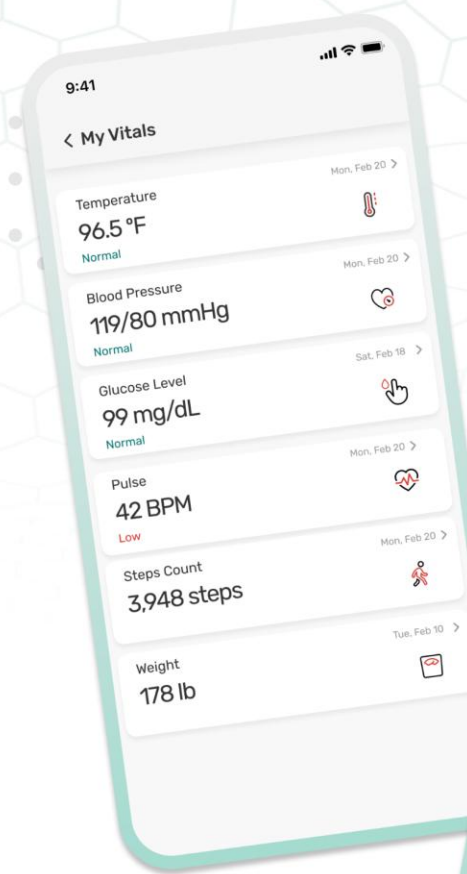

Another challenge was how to let patients record and track their vital signs and symptoms.

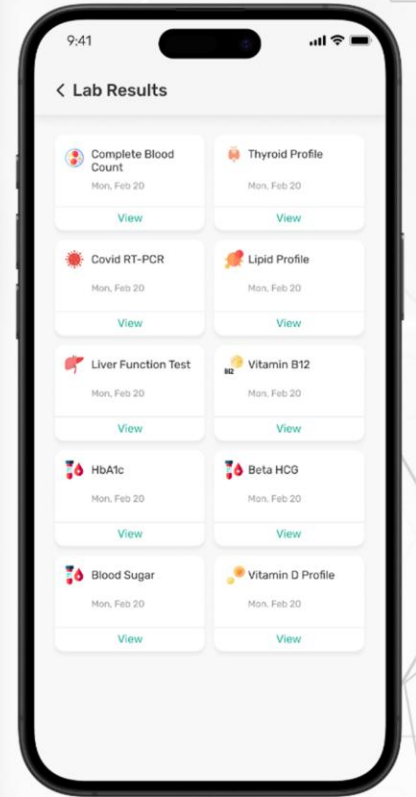

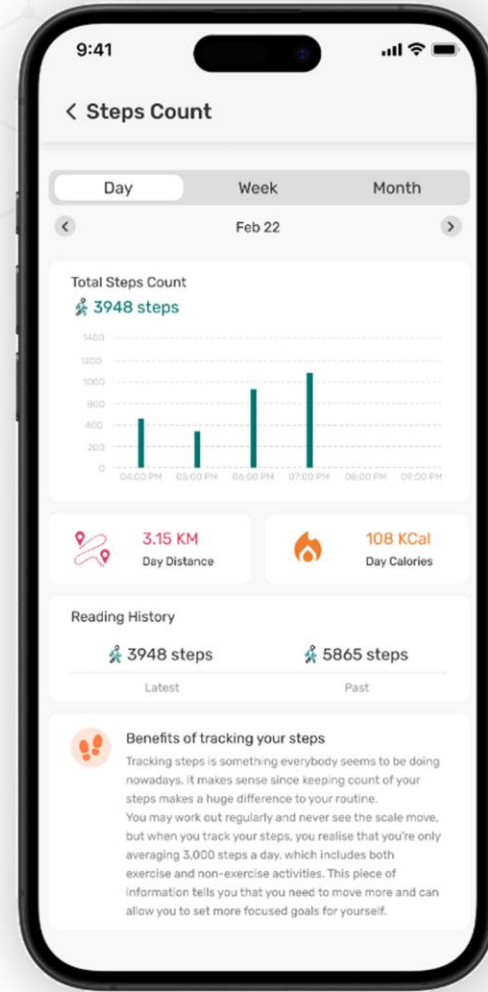

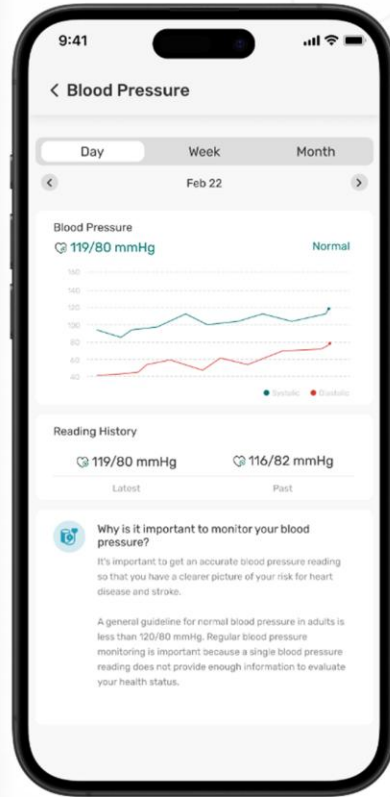

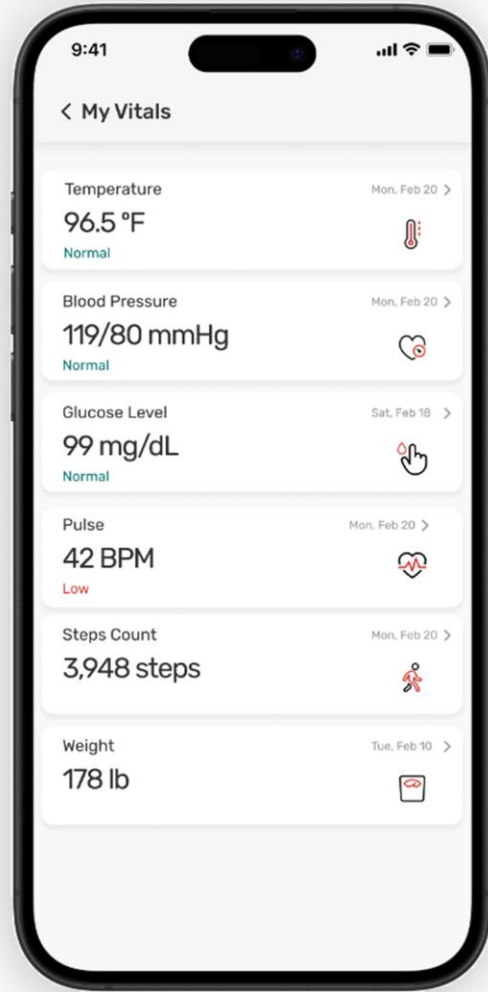

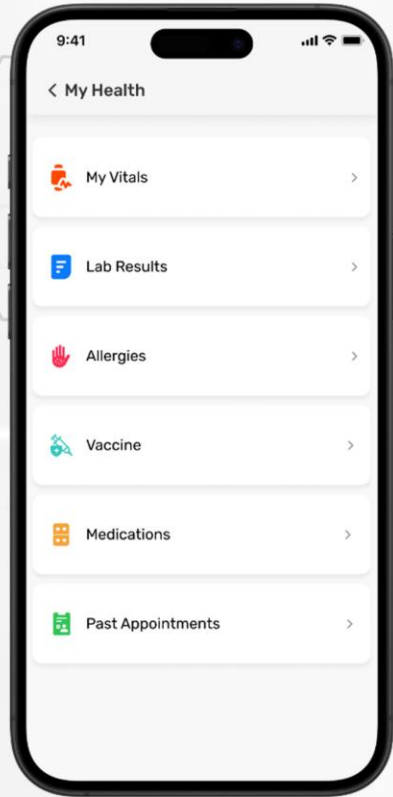

Solution

Capanicus built an advanced telemedicine app with AI voice-enabled capabilities which enabled patients to conveniently record their vital signs. The app also helped them log their symptoms. The vital sign metrics data and symptom information stored in the app provided patients with a comprehensive overview of their health status.

Impact

Access to the patients' vital signs and symptom information enabled healthcare providers to improve patient care and enhance efficiency.

Devices & Body Scales

Challenge

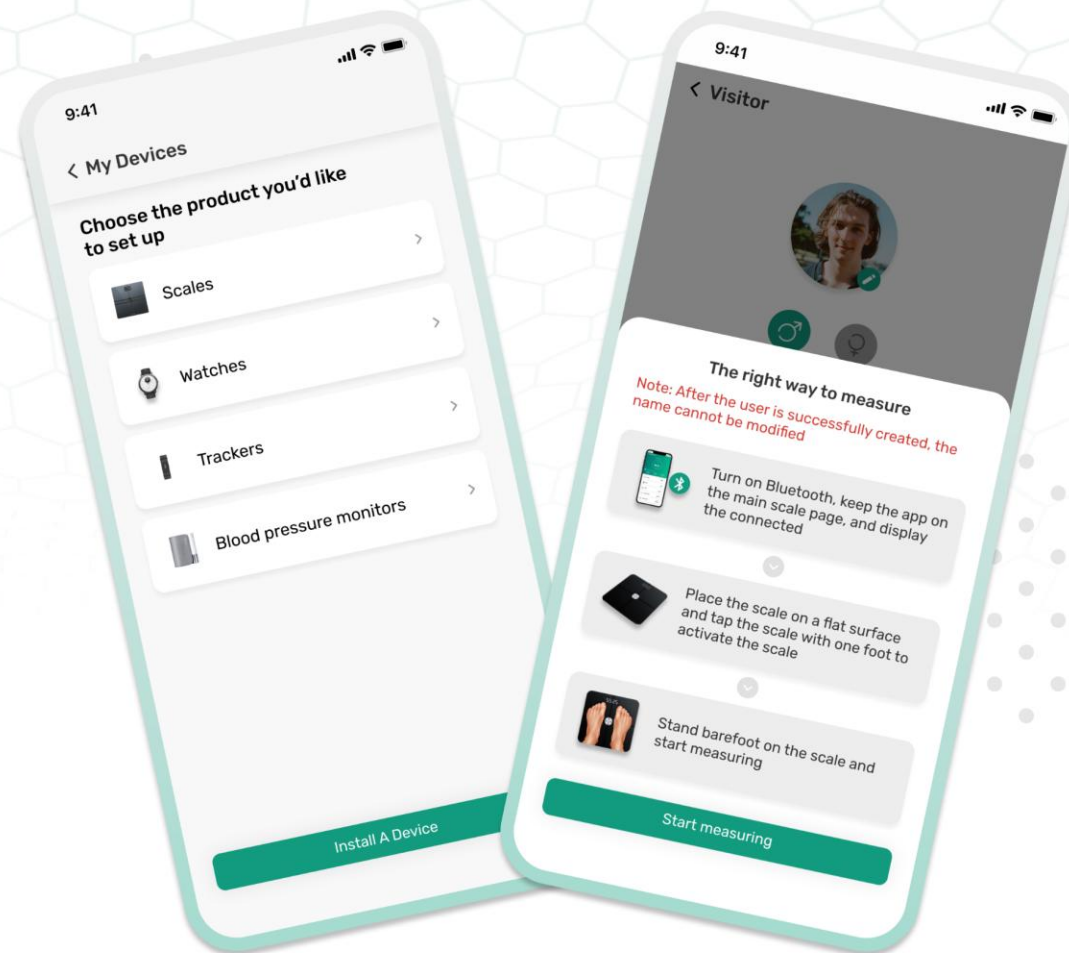

Another significant challenge was how to allow doctors & specialists to obtain their patients' health metrics data.

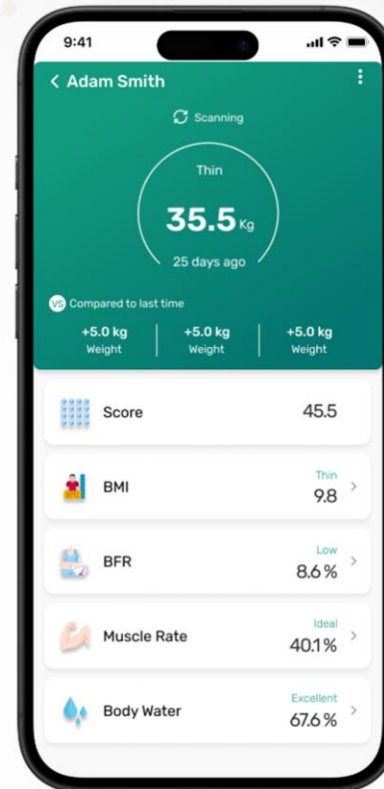

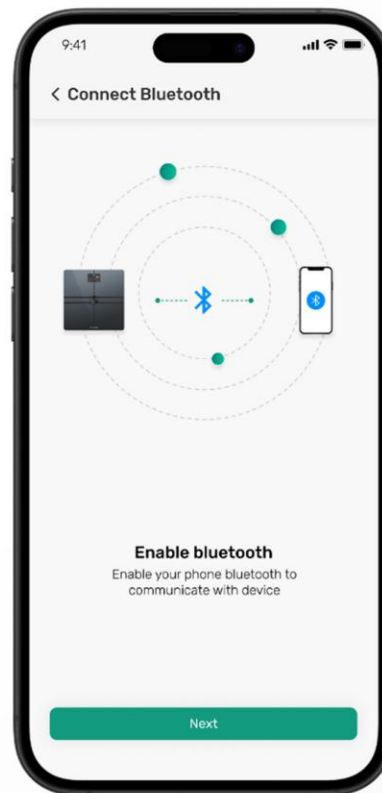

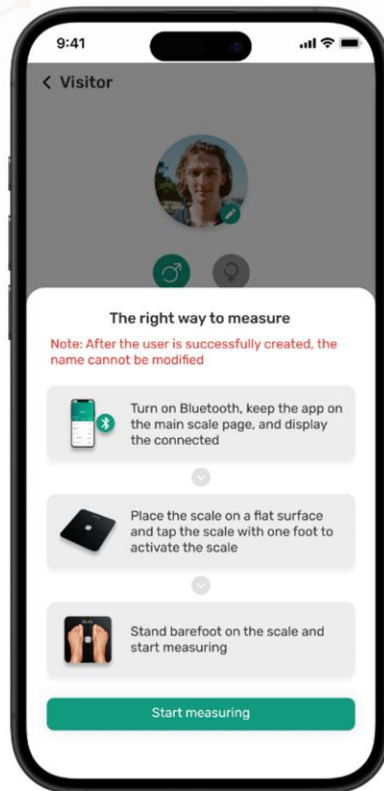

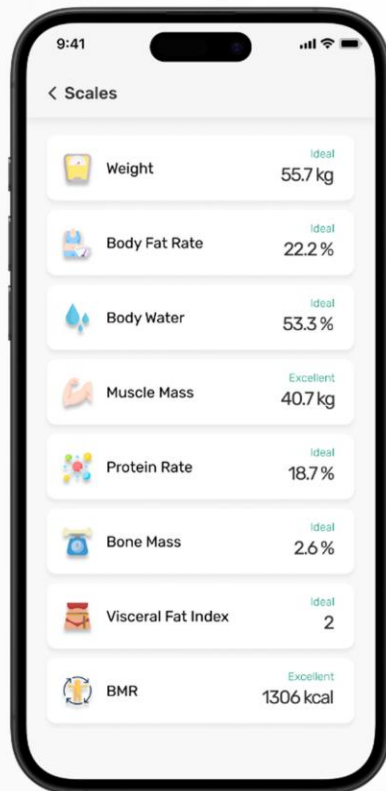

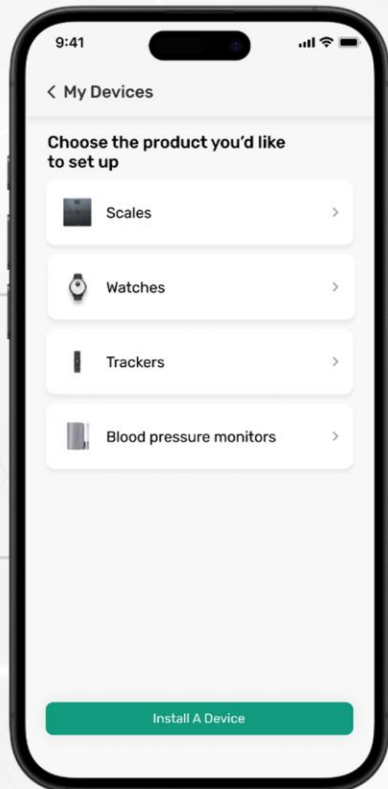

Solution

Capanicus addressed it by connecting the app with various smart health metrics monitoring devices, including a weighing scale used at the patient's end. This enabled doctors to receive patients' health metrics data in real-time to monitor their health and to make a diagnosis and treatment planning.

Impact

The metrics data analysis helped doctors make precise diagnoses and treatment planning decisions, leading to better health outcomes in patients.

Medicine, Pills & Nutrition Goals

Challenge

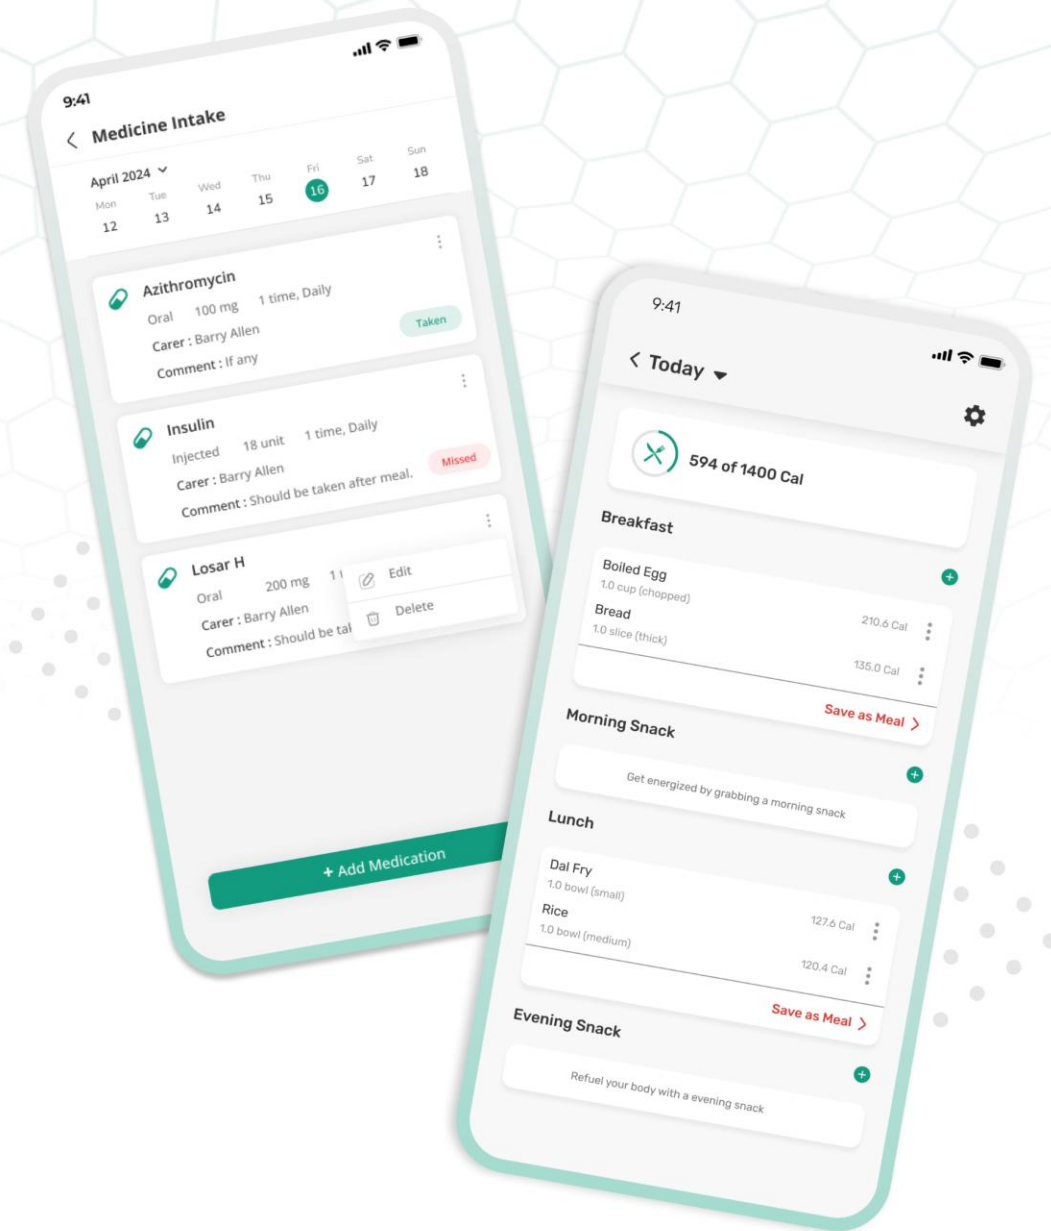

Another challenge was how to enable doctors & specialists to track and support the medicine, pills and nutrition goals of their patients.

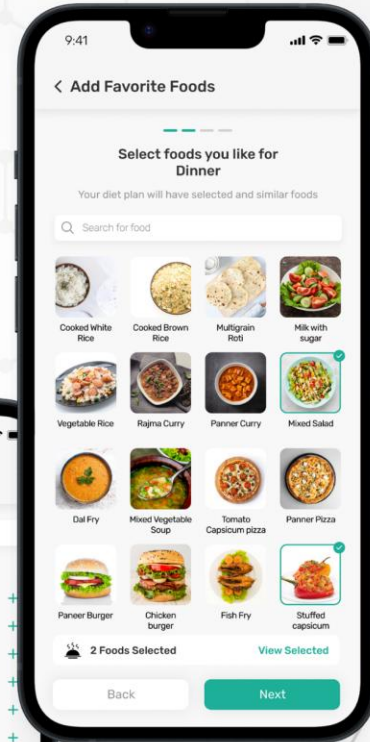

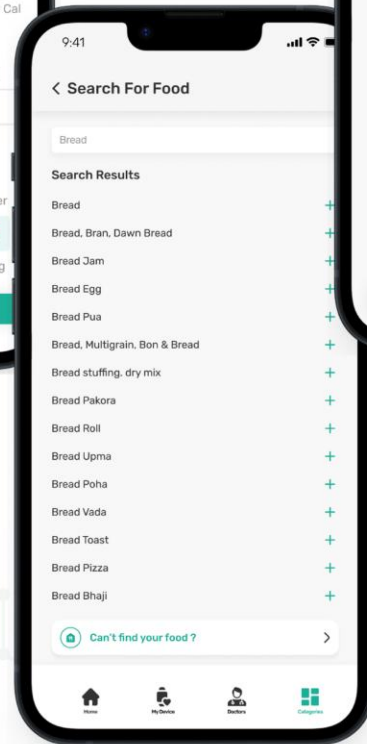

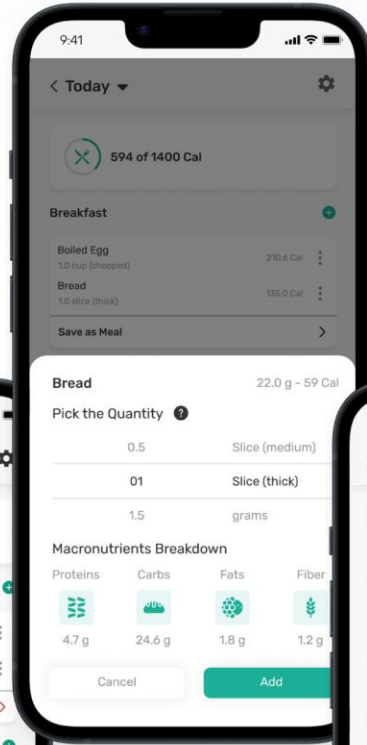

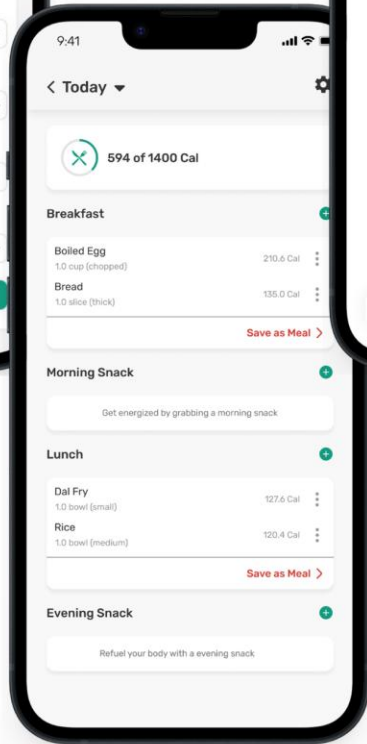

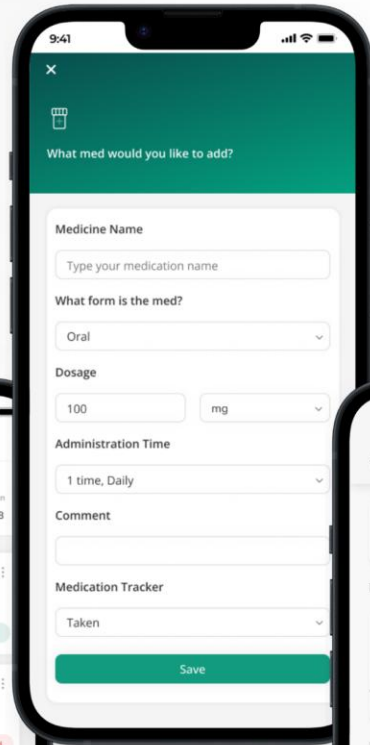

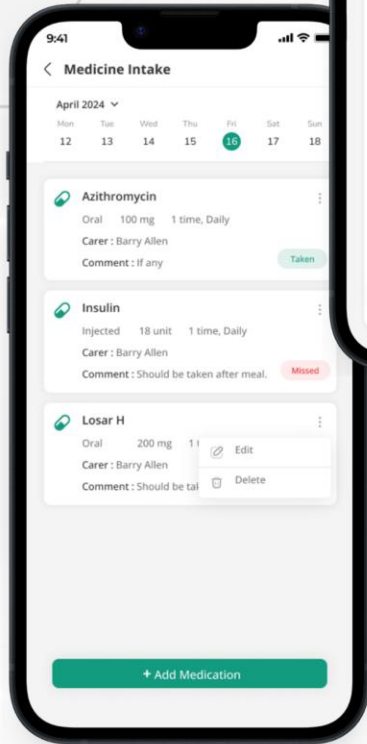

Solution

Capanicus developed a useful healthcare app with medicine and nutrition management capabilities. These included sending reminders to patients to take/refill medicines, tracking their symptoms, medicines and drug interactions, providing them medication and nutrition information and sharing data and reports.

Impact

The app helped reduce cases of patients missing taking and refilling their medicines and improved the achievement of their medicine and nutritional goals.

Pharmacy & Stores

Challenge

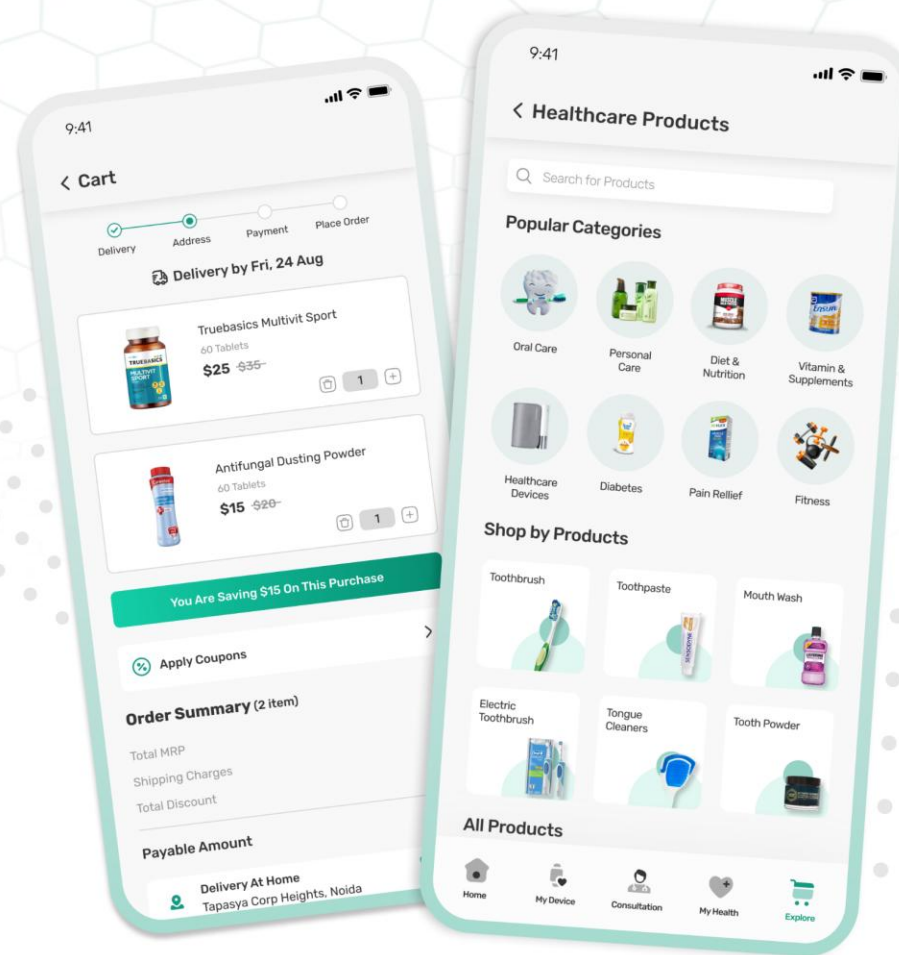

Another challenge was how to make online pharmacies and medicine stores accessible to remotely located patients requiring prescription medicines.

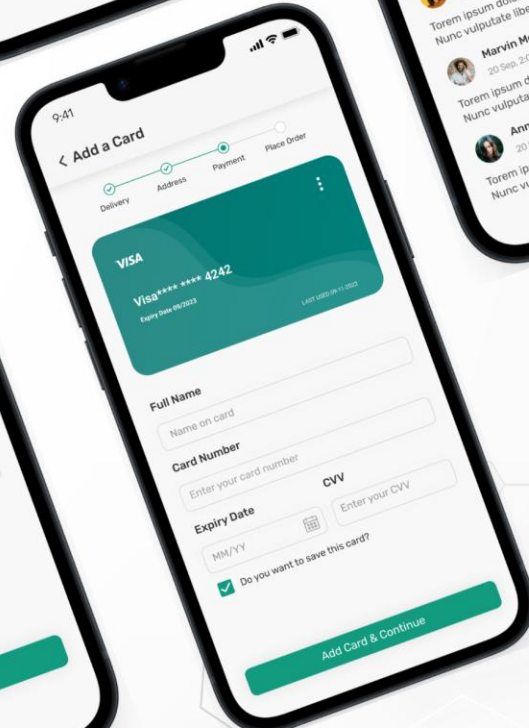

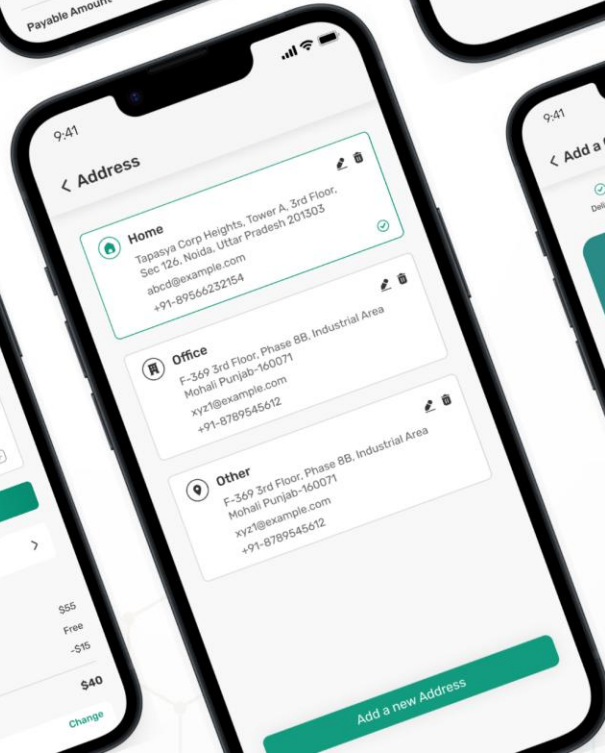

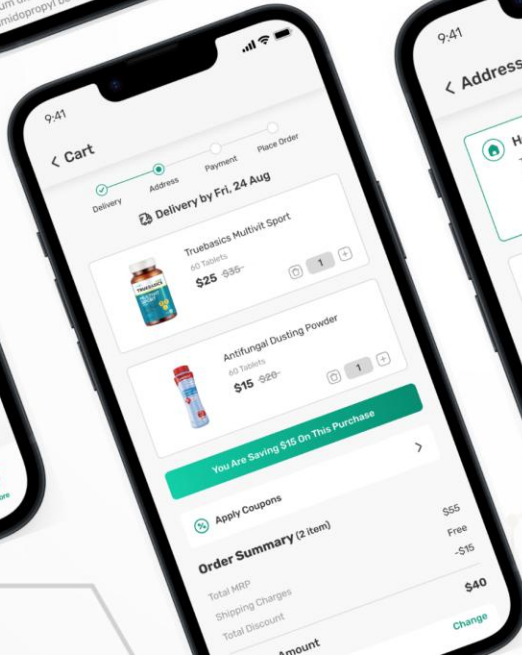

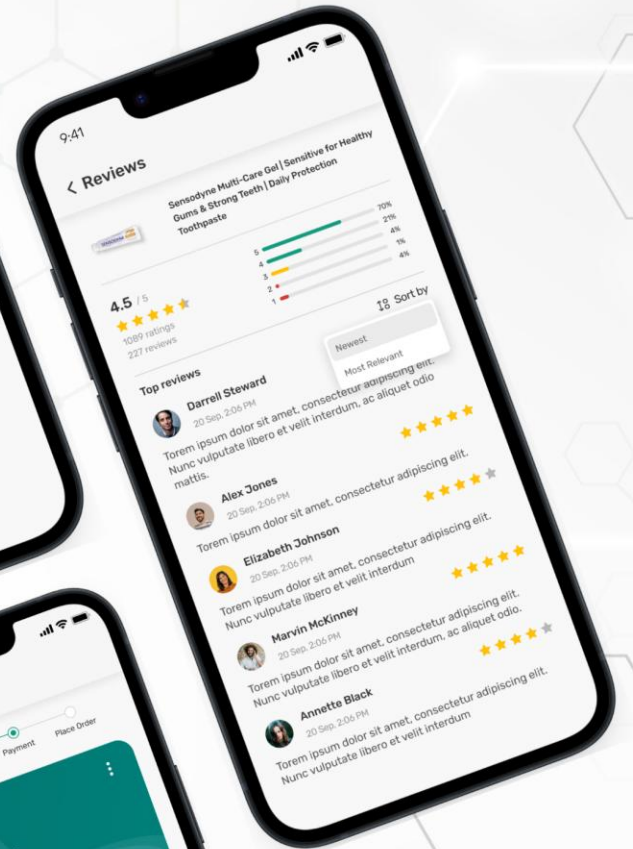

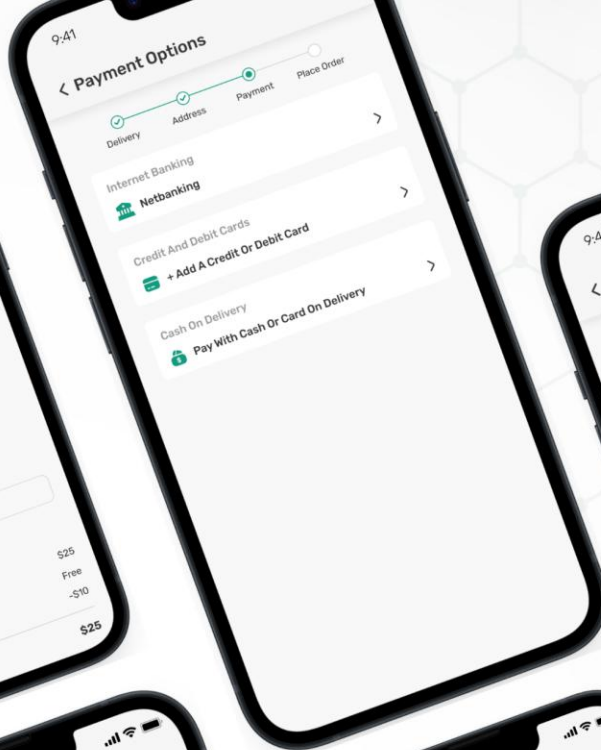

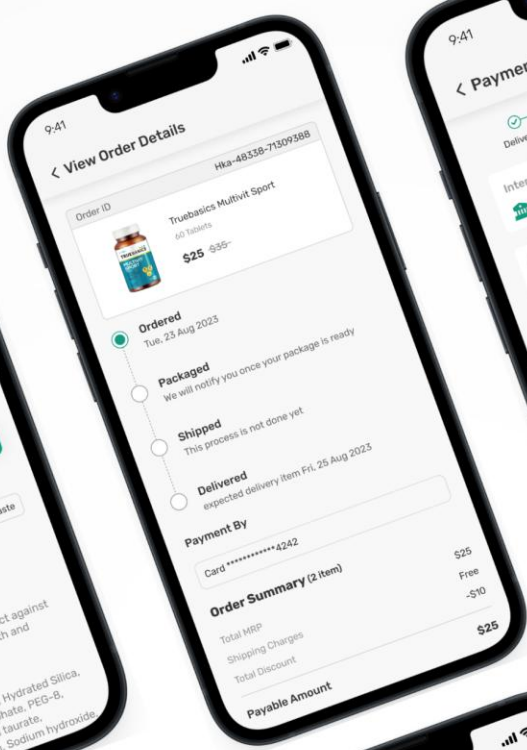

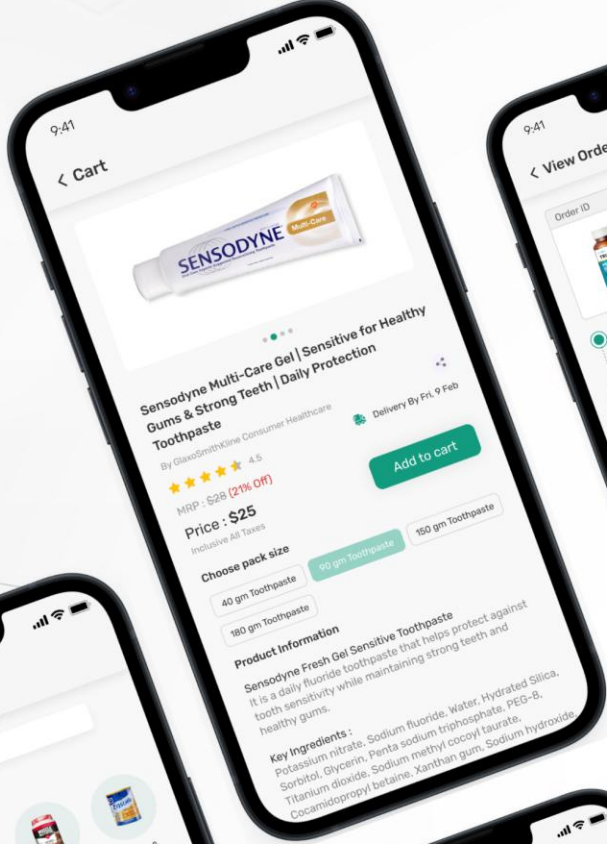

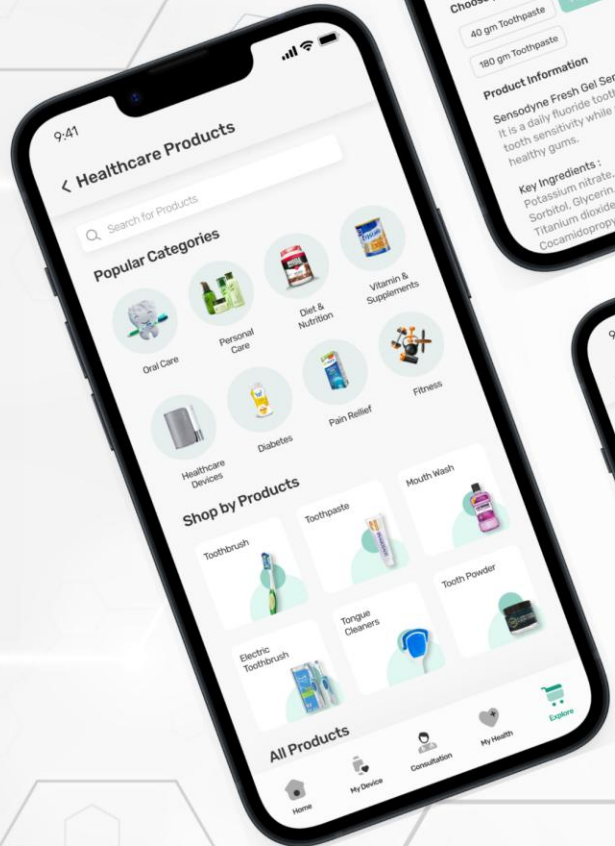

Solution

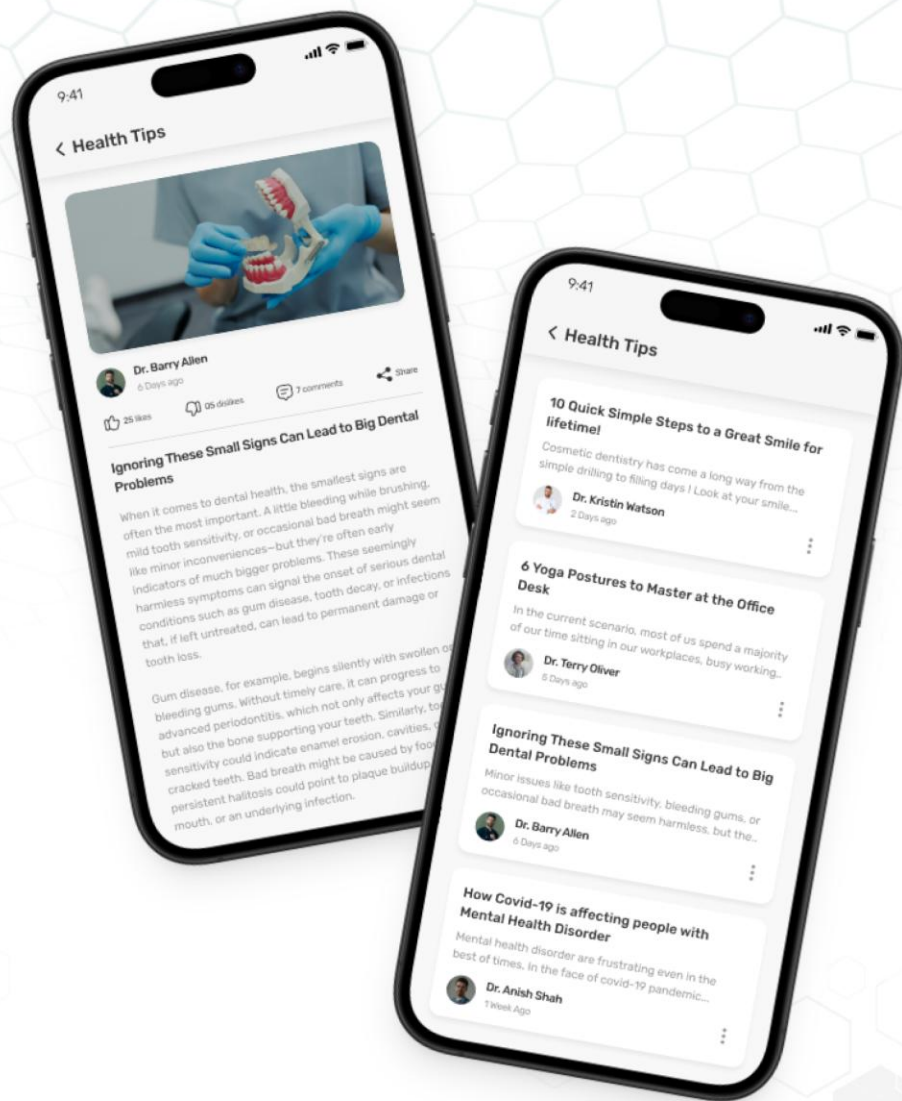

Capanicus developed a custom medicine ordering app for virtual pharmacy and medicine stores, equipped with various useful capabilities. These included patient authentication, prescription submission & tracking, online ordering of drugs, tracking of orders in real-time and sending prescription reminders to patients.

Impact

The pharmacies were able to improve patient engagement, satisfaction and loyalty, increase the number of users and generate more revenue.

Health Packages, Second Opinions, Feed & Guide to Deliver the Best Care

Challenge

The client was facing difficulty in satisfying & retaining their customers.

Solution

Capanicus helped him develop various health packages to enhance customer engagement. An additional feature provided a second opinion option to patients unsatisfied with the first consultation. A separate feed section and a health guide feature allowed users to ask queries, receive health updates, etc. from health specialists.

Impact

The health packages coupled with other customer-friendly features inspired repeat consultations, resulting in a substantial increase in ROI.

Subscription Plans & Fee Management For Experts

Challenge

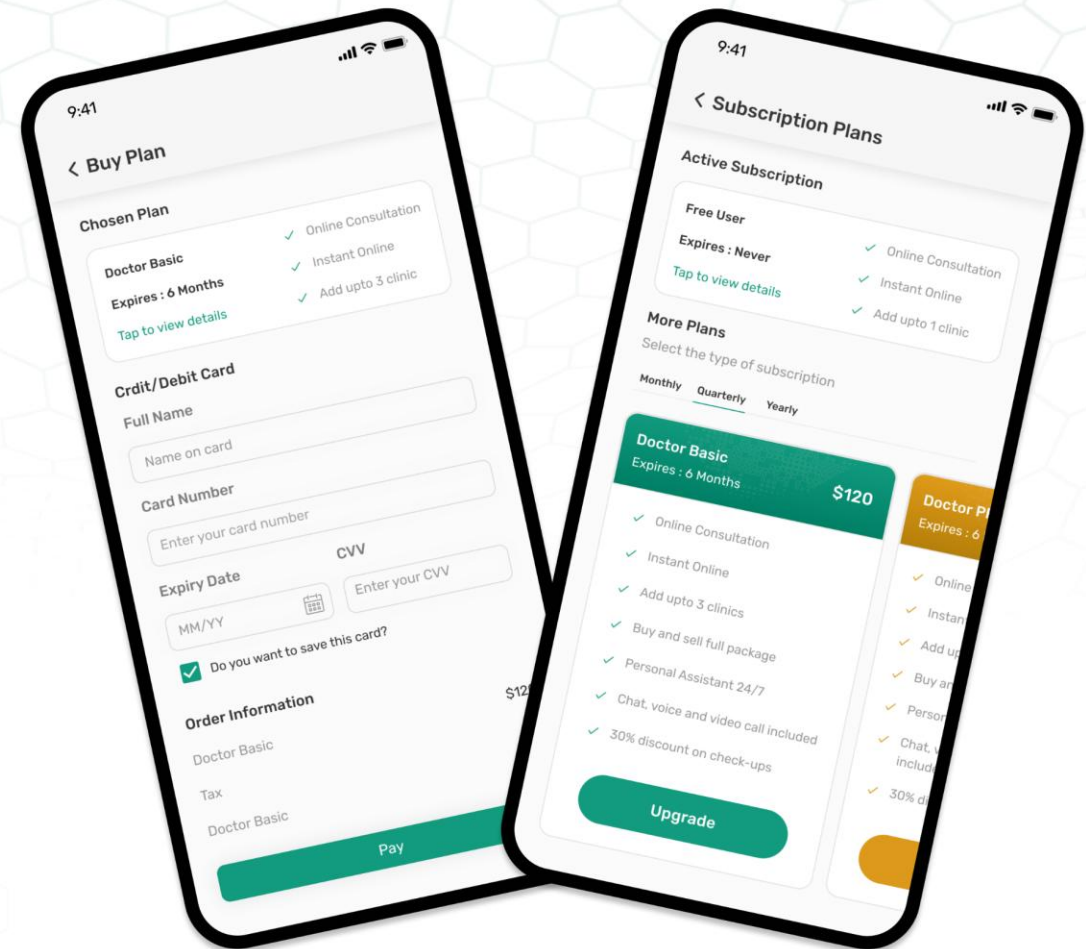

It was a huge challenge for the doctors registered on the health platform to manage their fees & payments.

Solution

We made it quite easy for doctors to add monthly, quarterly & yearly subscription plans and choose their period of service on the platform. Moreover, we gave them the option to set consultation fees in accordance to the chosen mode, health condition and other factors.

Impact

The availability of multiple plans on our health platform led to the retention of the majority of registered doctors and other healthcare specialists.

Highly Secured & HIPAA Compliant Solution

Challenge

HIPAA compliance was extremely necessary and must for our client's health app.

Solution

Keeping this in view, Capanicus developed a robust, scalable and secure technology solution to launch the client's healthcare business. We ensured that the entire information shared and stored within the system was fully encrypted as per specified HIPAA requirements.

Impact

The enforcement of the highest security standards helped reduce the healthcare fraud risk completely.

About Us

We are a software development company, committed to helping businesses build and enhance their custom software products with our expertise, industry knowledge and skills. We are dedicated to giving you the best products and reliable support and maintenance for all your business needs.
